PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in full-stack web development, relational databases, UI/UX design, software testing, and production deployment. Built a role-based academic monitoring system using PHP/MySQL and complex SQL across approximately 1,500 student records, supported healthcare-integration requirement mapping, and identified 24 bugs during government application testing. Recently hardened a public Astro/GitHub Pages portfolio with Content Security Policy (CSP), least-privilege CI/CD permissions, dependency auditing, and vulnerability-disclosure documentation. Seeking to strengthen this software and systems foundation through formal IT security training.

TECHNICAL SKILLS

Security exposure: Content Security Policy (CSP), secure CI/CD, least-privilege GitHub Actions, Dependabot, npm audit, sensitive-data redaction, SECURITY.md, RFC 9116 security.txt

Development & data: PHP, MySQL, SQL, JavaScript, HTML, CSS, Bootstrap, MVC, Git/GitHub, Astro, WordPress

Testing & systems: Functional testing, bug hunting/reporting, role-based data scopes, relational data processing, requirements mapping

Design & collaboration: Figma, FigJam, information architecture, responsive UI/UX design, technical stakeholder communication

EDUCATION

Computer Science | University of Gadjah Mada, Yogyakarta, Indonesia.

2022 - 2026

Bachelor of Computer Science, GPA 3.58 / 4.00. Hana Bank Foundation Scholarship recipient. Academic foundation in software development, web technologies, database management, data structures, and UI/UX design, reinforced through research, internships, and production-oriented projects.

PROFESSIONAL EXPERIENCE

Remote UI/UX Designer Intern at Datacakra | Jakarta, Indonesia.

Jan. 2026 - Feb. 2026

- Supported the RekMed-SATUSEHAT integration effort by surveying the existing medical-record product, mapping pages/features/actions, and translating integration requirements into interface-level field and workflow requirements for the PM/IT team.
- Designed a high-fidelity Smart Building real-time monitoring dashboard concept in Figma for a CEO-led partnership pitch, extending the company's existing design language and incorporating supervisor feedback on space use and typography hierarchy.

Full-stack Web Developer Intern at FMIPA UGM | Yogyakarta, Indonesia.

Aug. 2024 - Jan. 2025

- Designed and developed a role-based student performance monitoring feature for advisors, study-program heads, department leadership, and faculty stakeholders, with data visibility scoped to each role's organizational responsibility.
- Processed approximately 1,500 student records and wrote complex MySQL queries across interconnected academic tables to calculate study progress, detect delayed mandatory milestones, and derive monitoring information from raw records. Implemented automated two-stage warning-email workflows, dashboard statistics, pagination, and reporting support using PHP, MySQL, JavaScript, HTML/CSS, Bootstrap, and MVC architecture; performed functional testing before production handoff.

PROJECTS

Personal Portfolio Website - Security-Hardened Static Deployment

2026

- Built and deployed an Astro portfolio through GitHub Pages with no application backend, database, authentication, analytics, or server-side contact form, intentionally minimizing runtime attack surface and visitor-data collection.
- Applied a production CSP and referrer policy; hardened GitHub Actions with least-privilege job permissions and immutable full-SHA action references; added Dependabot, scheduled npm audit checks, SECURITY.md, and RFC 9116 security.txt.
- Documented the architecture, threat model, privacy boundaries, dependency/supply-chain risks, and vulnerability-reporting process in the public repository.

Remote UI/UX Designer at FMIPA UGM | Yogyakarta, Indonesia.

May 2026 - Sep. 2026

- Redesigned the faculty website's information architecture and responsive interfaces, simplifying redundant navigation and translating approved designs into WordPress using Gutenberg and Elementor within institutional branding and free-tooling constraints.
- Participated in repeated stakeholder/UAT reviews with lecturers and faculty leadership, resolving usability, editorial, responsiveness, and content-structure issues before staging deployment.

Beta Tester at Ministry of Energy and Mineral Resources | Yogyakarta, Indonesia.

Sep. 2024

- Performed focused beta testing and bug hunting on an internal government application, identifying and reporting 24 functional and stability issues within a 6-hour testing session.

LSTM on Time Series Datasets Prediction Research

Jul. 2024 - Sep. 2024

- Implemented an LSTM method in C++ from scratch without external libraries, producing 800+ lines of code with dynamic variables for continued research development under academic supervision.

ACHIEVEMENT

Hana Bank Scholarship Awardee

Nov. 2024 - Present
